

quik-lok. LIBRARY SHELVING

Another **HUPP** Product From **AURORA STEEL PRODUCTS DIVISION**

BROCHURE 4120

BOOKS AT THEIR BEST

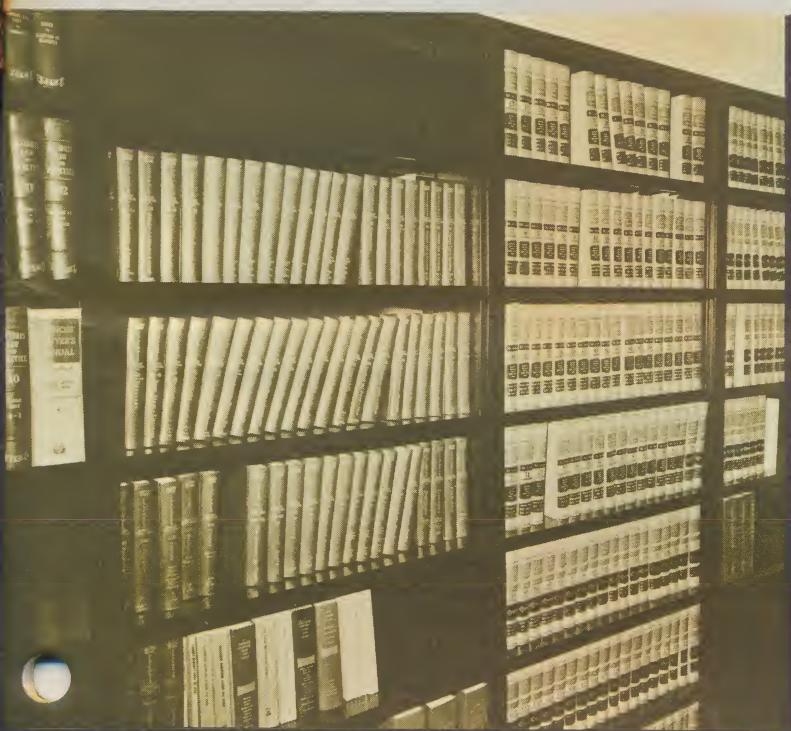

Books look their best and are kept in best condition when placed in QUIK-LOK Library Shelving made by Aurora Steel Products Division of the Hupp Corporation. The unique, patented QUIK-LOK principle brings to libraries the ultimate in Simplicity, Beauty and Strength. No matter how many volumes you have . . . no matter what decor you choose . . . no matter what your space limitations are . . . QUIK-LOK Library Shelving can be specified with complete confidence. These pages show you a few of the many leading libraries now enjoying the exclusive benefits of QUIK-LOK Shelving which keeps **books at their best**.

Wood veneer end panels lend an air of quiet elegance to this multi-floor university library. This is typical of the many types of veneer which can be used with Quik-Lok Shelving to achieve just the decor you desire.

An industrial library provides important records the environment they deserve with Quik-Lok Library Shelving. This same firm also uses over 1000 sections of Quik-Lok Heavy Duty Shelving.

Another library installation of Quik-Lok Shelving utilizes space efficiently with Shelves on $1\frac{1}{2}$ " centers. $1\frac{1}{4}$ " Shelf Flanges support heavy books without sagging. Black finish accents decorator's plan.

Floor-to-ceiling storage beautifies an unused wall in a functional way. This arrangement eliminates the need for a top shelf.

Advertising agency uses "L" end posts at row ends to provide clean line design. Note the absence of holes. (For detail drawings of end posts, see Page 7.)

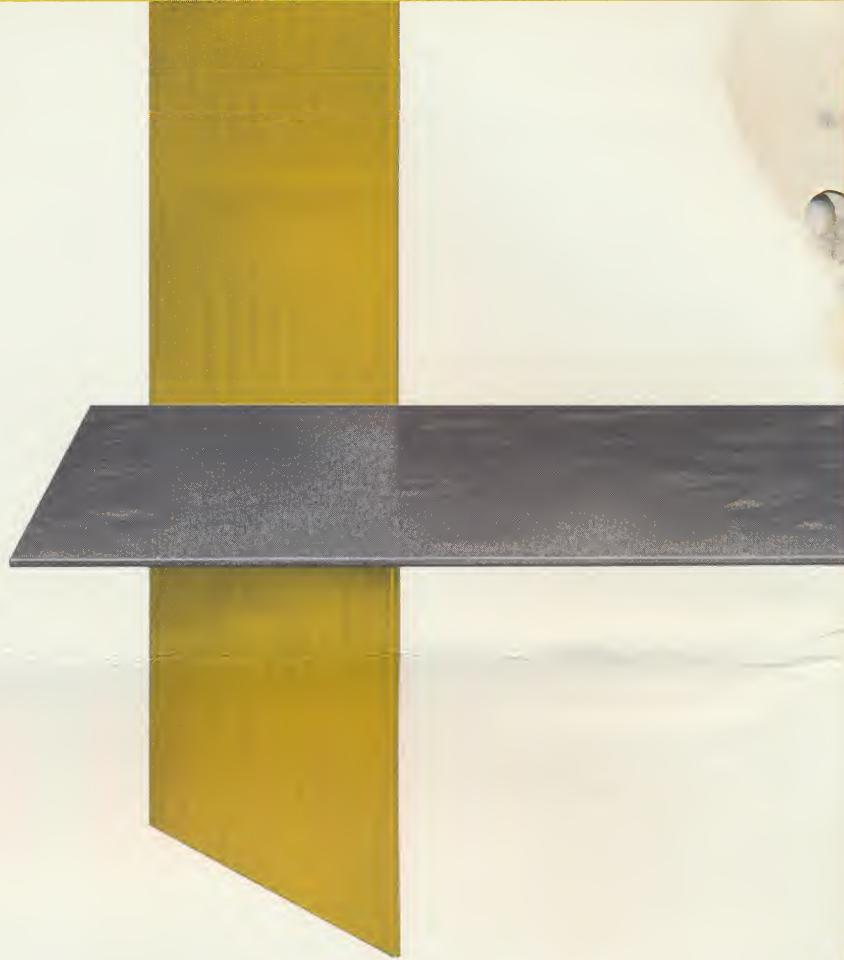

This new "showplace" library achieves the ultimate in shelving appearance with QUIK-LOK. Walnut laminate end panels in combination with black finish on shelves was specified by the decorator for both the children's section and the main library area.

HIGH STYLE

Laminated plastic and wood end panels

You can achieve the strength of steel and the warmth of wood by specifying wood or laminated plastic end panels on QUIK-LOK Library Shelving. This perfect combination permits you to match the highest quality shelving to any library decor for the ultimate in functional beauty.

Panels consist of laminated plastic or wood veneer, bonded to $\frac{3}{4}$ " plywood and mounted inside the "T" uprights in place of steel panels. See Page 7 for details.

Birch end panels on QUIK-LOK Shelving were chosen for this large university library to match the tone and texture of wood tables and chairs. Although softer than the high pressure laminates which are more resistant to damage, authentic wood veneers are the perfect touch of elegance for this type of application.

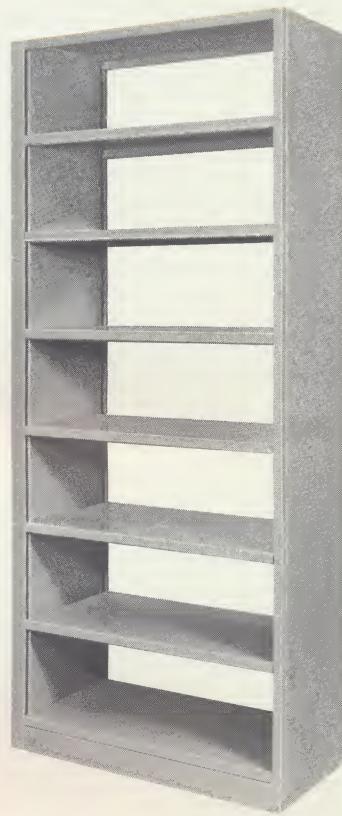

Walnut laminate end panels on QUIK-LOK Shelving match the table tops in the study area of this large law library. The special end panels are used on both sides of the 10-foot aisle. Laminates are extremely hard and resist damage by book trucks, etc. even more effectively than steel.

UNIQUE DESIGN

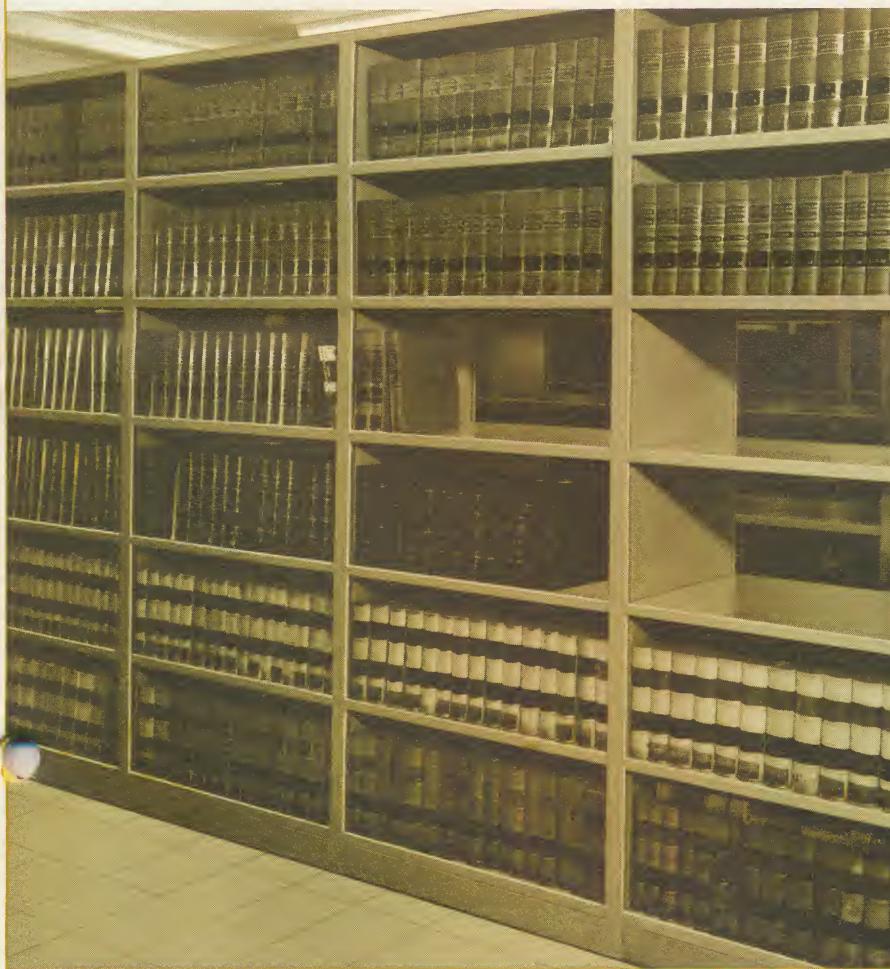

Just 3 basic parts

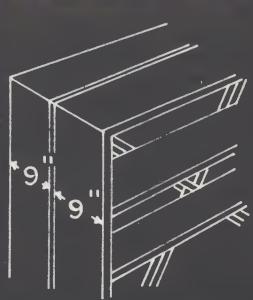

SIMPLICITY, BEAUTY, STRENGTH. These famous QUIK-LOK Shelving attributes are now combined into a sophisticated new concept—a shelving "system" which serves any type of library need with just three basic parts. Stock components are 36" wide; 9", 13", 18", 26" deep; and 40 $\frac{1}{4}$ ", 76 $\frac{1}{4}$ ", 88 $\frac{1}{4}$ " high. Standard colors are gray, desert sand and mist green. Special colors are available at nominal extra charge. Shelves are adjustable on 1 $\frac{1}{2}$ " centers. Standard shelves have 1 $\frac{1}{4}$ " Flanges, but shelves with 1" Flanges are available when recommended by our library representative.

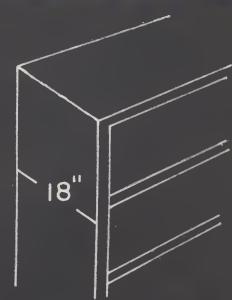

The three basic parts assemble quickly by hand. There are no nuts, bolts, clips, or sway braces in QUIK-LOK Library Shelving. The units are unexcelled in simplicity, beauty and strength. Pat. No. 2992744.

DOUBLE ENTRY STORAGE

CONVENTIONAL SHELVING :

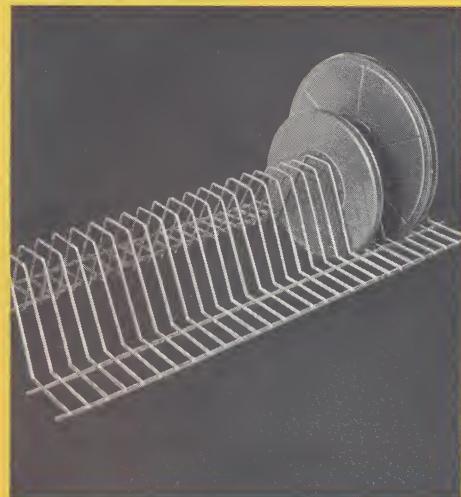

QUIK-LOK SHELVING

NO SWAY BRACES. Sketches show advantages of QUIK-LOK Shelving as a law library installation. Absence of sway braces permits double entry storage using single 18" deep sections instead of back-to-back 9" deep units. All the strength you need with half the usual number of units—a remarkable value at dramatic savings in cost.

CENTER STOP. For double entry units, with shelves on 12" centers, ingenious center stop hangs from angle welded to shelf above and divides shelf depth in half. Serves as stop for books or files in both faces of shelf. Must be ordered with original unit. Part No. 3608CS.

REEL RACK. Fits between shelf supports on 13" deep unit. No shelves required. Wires 1" apart and 7" high designed to hold 16 MM film. Part No. 3612RR.

CARD HOLDER. Snaps quickly into end panel slots. Can be used as shown or turned around so it will not extend into aisle space. Install it at any height. Part No. 0305CH.

SHIM. Compensates for unlevel floors, and protects tiling from marring. Part No. 0105PS.

WALL TIE. Ties shallow section of shelving to wall. Adjustable to compensate for molding, if necessary. One every other post is ample. Part No. 0104WT.

SLIDING DOORS. Conserve aisle space. Each sliding door is 36" wide, and is shipped in two and three wide sets with lock. One lock secures all doors in a set.

SWINGING DOORS. Utilizing the savings in a full height door, and favored where matching "storage cabinet decor", swinging doors have further advantage of being available for one-wide sections. Both slide and swing doors are standard QUIK-LOK assembly.

Choice of Upright Styles

"T" UPRIGHT. Used to gain advantages of common-post construction and, with a modified panel, when wood or laminate end panels are desired.

"L" UPRIGHT. Used to dress up ends of rows and eliminate the 1" overhang at each row end. Must be used at ends of row for ledge tops.

FIVE-MINUTE ASSEMBLY

No tools needed

By means of supports front and rear, shelves with $1\frac{1}{4}$ " flanges are adjustable on $1\frac{1}{2}$ " centers. Normal spacing is on 12" centers providing $10\frac{3}{4}$ " clear opening. 11" shelf openings are available if special 1" Shelf Flanges are specified.

Lugs in shelf supports fit into slots punched on the inner wall of upright "T" posts and optional "L" posts. Patented QUIK-LOK construction provides maximum protection for books and neatest appearing shelving you can specify.

Position uprights. Temporarily place one shelf support at any convenient location. Insert base and bottom shelf supports.

Fit shelf over these supports. Then add two more supports at next shelf location . . . place shelf . . . continue up the unit.

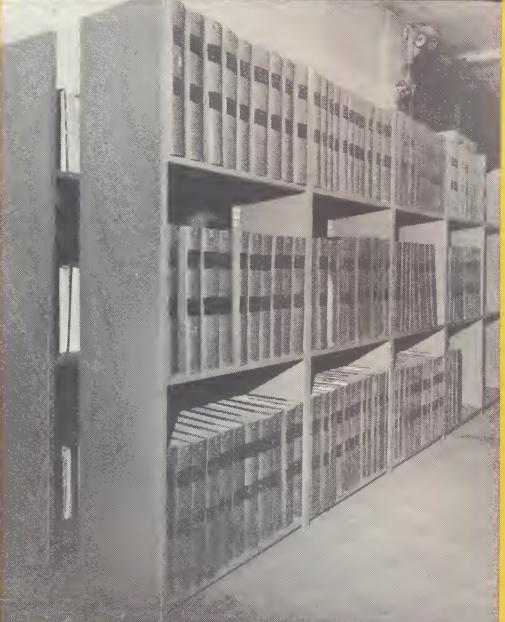

Add extra sections as required. Utilize common center uprights. (An additional upright must be used to complete a row of shelving.)

IN THE STACKS

Thousands of low-demand books are stored by a library in this QUIK-LOK Heavy Duty Shelving installation. Because of infrequent use, double-wall library uprights were not required and greater economies resulted.

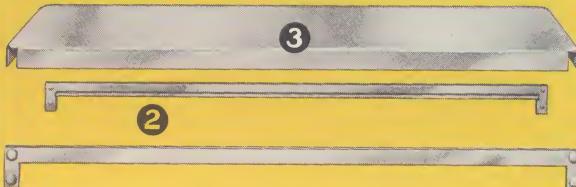

These bulky volumes in a world-famous university library exceeded the weight limitations of any library shelving. QUIK-LOK Heavy Duty Shelving proved to be the graceful answer in this section of archive storage.

Standard QUIK-LOK shelving is economical answer for stacks and archives

For stack storage and heavy archives materials, and where budget considerations are foremost, QUIK-LOK Heavy Duty Shelving is the ideal solution. Because double-wall construction is eliminated, you receive the strength and beauty of QUIK-LOK Library Shelving at lower cost. For further information ask for the descriptive brochure on QUIK-LOK Heavy Duty Shelving.

Just 3 basic parts

1 UPRIGHTS have solid sheets welded between the posts at the center, eliminating the double-wall construction of the more elaborate Library Shelving line.

2 SHELF SUPPORTS provide full width support under each shelf, front and back. Lugs on support fit into holes punched on the inner wall of upright posts.

3 SHELVES fit over shelf supports and behind the face of "T" upright since this economy version omits the double-wall panels. 1 1/4" flanges insure extra strength for unusual loads.

QUIK-LOK Heavy Duty Steel Shelving assembles in less than five minutes without tools. There are no nuts, bolts, clips or sway braces to damage valuable books. By eliminating sway braces you have easy access from front and back. Fast assembly and disassembly means these shelving sections can quickly be moved, giving you the ultimate in storage flexibility.

***The Craftsmanship
in QUIK-LOK
Library Shelving
is Matched
to the Value of
Your Books***

Design ingenuity and manufacturing craftsmanship combine to make QUIK-LOK Library Shelving the quality standard of libraries everywhere. Warm, clean line, contemporary style is assured. Complete creative flexibility is inherent in the design. Maximum visibility and protection of books are provided. Your nearby QUIK-LOK dealer can assist you or your architect in shelving layout, and suggest helpful accessories to make your library even more useful. Put QUIK-LOK Library Shelving to work wherever books are important.
